About XIRR XIRR (Extended Internal Rate of Return) measures the annualised return of your investments, accounting for the exact timing and size of each cash flow. Unlike simple returns, XIRR correctly handles irregular investments and partial withdrawals — making it the most accurate way to compare performance across different portfolios and time horizons.

Nifty 50 Benchmark The benchmark simulation invests the same rupee amounts on the same dates in the Nifty 50 index. Withdrawals are proportionally accounted for by redeeming units at the prevailing price. This lets you see whether active stock-picking or SIPs beat a simple index fund strategy over your investment period.
